

Thank you for your email and interest in our line of products from EnviroGLAS®. Please find below some helpful information that relates to representation, purchasing, pricing, shipping and installation of our product line.

EnviroGLAS® offers a variety of recycled glass and porcelain products for decorative use. We do not manufacture glass! Affordable and unique EnviroSLAB™ countertop slabs and EnviroPLANK™ floor tiles are custom manufactured with 100% recycled glass and/or porcelain and color pigmented epoxy resin in Texas. Product representation is currently conducted from our corporate office. We ship directly to professional installers, jobsites and homeowners worldwide.

ENVIROSLAB™

Suitable for kitchens, bathrooms, or any other countertop application, EnviroSLAB countertops are 1" thick, 27" deep and 84" long (nominal). A reputable local countertop fabricator will be able to complete the installation. We recommend an installer experienced with granite and marble. Another option is to locate a Silestone® or Zodiaq® dealer, and they can be found at distribution centers, Home Depot and Lowes Home Centers, through an internet search. The fabricator/installer can easily cut the polished slabs to size and then seam pieces together if necessary (1/64"inch) to fit just about any layout. The installer will also measure for and complete sink cut-outs and edge detailing. We do have a number of schematics available on our website to assist in the installation and can send a sample template for testing the EnviroSLAB material.

EnviroSLAB is a signature countertop that allows one to make an artistic and environmental statement. Still, many people inquire about how EnviroSLAB compares to granite. The short answer is: very favorably. The beauty and durability of granite and EnviroSLAB are comparable – both are stunning and will last the lifetime of a building. Yet people concerned about the natural environment appreciate that while granite must be taken from the earth, EnviroSLAB honors the earth by diverting trash from the landfill. EnviroGLAS also compares favorably to Zodiaq®, Corian®, Silestone®, IceStone® and Vetrazzo™.

EnviroSLAB is highly resistant to common stains and can be cleaned easily by applying neutral cleaners and maintained by applying a professional grade marble/granite polish. EnviroSLAB is heat and scratch resistant. EnviroSLAB weighs approximately 16 pounds per square foot. We do recommend using a cutting board under sharp objects and a heat-proof trivet under hot cookware. EnviroSLAB emits no VOC's and does not require a seal. *We welcome your imagination!*

Standard EnviroSLAB countertops sell for *\$50 per square foot*. Safety-enhancing EnviroGLO aggregate or other specialty aggregate or clear or another custom pigmented epoxy resin increases the cost to \$70-\$90 per square foot. Installment costs may range from \$35 a square foot and up.

ENVIROPLANK™

These sustainable and unique 6" x 36" x 3/8" (nominal) Terrazzo flooring planks are also custom manufactured with 100% recycled glass and/or porcelain and color pigmented epoxy resin. The planks are laid out in a staggered or random bond fashion, and so achieve a look similar to that of a wood floor. The seam can be as small as 1/64". A reputable local tile installer will be able to complete the installation using a thin set mortar, epoxy grout and a wet saw with a diamond blade. EnviroPLANK is a great application for foyers, kitchens, bathrooms (including showers) and laundry rooms and is compatible with radiant heating systems. EnviroPLANK weighs approximately 4 pounds per square foot. It's a great solution for pet owners and it can be used on walls and countertops as well. ***We welcome your imagination!***

Care and maintenance of EnviroPLANK is cost-effective and simple -- a neutral cleaner and water will keep the tile looking great. EnviroPLANK is scratch resistant, but please use caution when moving heavy objects across the floor. Custom EnviroPLANK Terrazzo in standard colors sells for ***\$20 dollars per square foot***, and will last the lifetime of a building. A custom size (24"x36"x3/8"), specialty epoxy resin and/or aggregate increases the price to \$30 a square foot.

Custom EnviroSLAB and EnviroPLANK orders usually arrive within 6-8 weeks. Shipping and crate charges will vary based on quantity and weight. On average the cost will run \$0.50 cents per pound of total weight shipped plus the cost of the crate(s). One EnviroSLAB crate (\$300) can package up to (7) slabs. One EnviroPLANK crate (\$300) can package up to (275 sq ft).

ENVIROTRAZ™

If the flooring area is larger than 5000 square feet, you may want to consider 3/8" poured-in-place EnviroTRAZ™. On-site terrazzo installation costs average \$18-\$30 per square foot and up depending on the local economy and size/scope of the project. Due to low maintenance and durability, EnviroTRAZ is one of the most economical flooring applications for long term asset buildings. Working with a local installer in your area, we offer endless color and design possibilities. ***Specify EnviroTRAZ™... Revolutionize Terrazzo.***

ENVIROSCAPE™

EnviroSCAPE is the newest trend in decorative, eco-friendly, sustainable landscaping! EnviroGLAS offers a variety of post-use recycled glass and porcelain aggregate options for decorative use as landscaping groundcover or mulch, in aquariums and fountains, and anyplace sand is used. The proprietary process produces post-use recycled glass and porcelain in a variety of sizes with virtually no sharp edges. Glass and porcelain ground cover works especially well in garden pathways where drainage and erosion is a factor. Prices range from \$25 to \$35 per bag depending on the quantity and color/type of aggregate.

At one inch of depth, one 50 lb bag will provide coverage over 7 square feet, or .5 cubic feet. A simple calculation: ***square footage x depth x 7 = total number pounds needed to cover area.***

In keeping with environmental stewardship, we don't produce catalogues or sample binders. Prospective clients can visit our sample gallery at <http://www.enviroglasproducts.com/formulas.asp>. We look forward to working with you! ***Our North Texas Showroom is located at 5048 Tennyson Parkway, Plano, TX 75024. Showroom hours are 9am-4pm Monday-Friday. Appointments are recommended.***
