

ENVIROPLANK™ TERRAZZO... THE NEXT LOGICAL PROGRESSION IN TERRAZZO

With an eye toward cost-efficiency, maintenance and the environment, designers, architects, facility owners and homeowners all have joined the dialogue on sustainability. Fortunately, products with a lengthy life cycle are not only ecologically sound but also cost effective over the long term. No approach to sustainability is more logical than recycling, so recycled building materials that accommodate the goals of ecology and sustainability, as well as meeting high aesthetic standards, are in great demand.

Colorful EnviroPLANK™ Terrazzo is one building product that meets all the criteria. Made of unique mixtures of 100% crushed consumer and industrial post-use glass and a non-emitting epoxy resin binder, EnviroPLANK™ Terrazzo can contribute to seven or more of the 69 total US Green Building Council LEED® (Leadership in Energy and Environmental Design) points available. Just as appealing as the product's 40+ year life cycle is its exquisite beauty. With eight glass options and fully customizable pigmented epoxy resin, the color possibilities are endless. EnviroPLANK's minimal maintenance requirements are also easy on the pocketbook, as well as on the environment.

EnviroPLANK™ is hand crafted into 6" x 36" x 3/8" plank tiles and can be installed by a professional tile applicator. Now the look of vivid gems embedded in a glossy Terrazzo finish -- previously only crafted on site -- is available at an affordable price for residential and light commercial applications under 1500 square feet.

While municipal and other governmental officials have begun endorsing the use of recycled glass in Terrazzo as one solution to recycled glass gluts and landfill overcrowding, inquiries are surging from interior designers, architects, facility owners and homeowners who want to add sparkle to floors and decorative surfaces while doing their part to take care of the environment. To learn more about EnviroPLANK™ Terrazzo, please call (888) 523-7894 or visit www.enviroglasproducts.com.
