

# ENVIROSLAB™

## RECOMMENDED SPECIFICATIONS AND MAINTENANCE

With an eye toward cost-efficiency, maintenance and the environment, designers, architects, facility owners and homeowners all have joined the dialogue on sustainability. Fortunately, products with a lengthy life cycle are not only ecologically sound but also cost effective over the long term. No approach to sustainability is more logical than recycling, so recycled building materials that accommodate the goals of ecology and sustainability, and also meet high aesthetic standards, are in great demand.

Colorful EnviroSLAB Terrazzo is one building product that meets all the criteria. Made of unique mixtures of 100% crushed consumer and industrial post-use glass and a non-emitting epoxy resin binder, EnviroSLAB Terrazzo can contribute to seven or more of the 69 total US Green Building Council LEED® (Leadership in Energy and Environmental Design) points available. Just as appealing as the product's 40+ year life cycle is its exquisite beauty. With eight glass options and fully customizable pigmented epoxy resin, the color possibilities are endless. EnviroSLAB's minimal maintenance requirements are also easy on the pocketbook, as well as on the environment. EnviroSLAB does not require a chemical sealer. When cleaning the surface use only neutral cleaners with a PH Factor between 7 and 10. Wipe clean with a damp cloth. EnviroSLAB is highly chemical resistant to common household stains. Simply maintain the finish by applying a professional grade marble/granite polish such as Goddard's Granite and Marble Polish.

EnviroSLAB is hand crafted into a standard 27" x 84" x 1" (nominal) size, ready to be shipped to a professional countertop applicator for fabrication and installation. Virtually...translucent glass producing a seamless look! Now the look of vivid gems embedded in a glossy Terrazzo finish -- previously only crafted on site -- is available at an affordable price for anyone remodeling or constructing decorative surfaces and countertops.
